Tutorial 9 Language Integrated Query (LINQ)
(to be done in Week9)

Tutorial Objectives:

- **Learn LINQ:**
  - Write C# statements using LINQ syntax

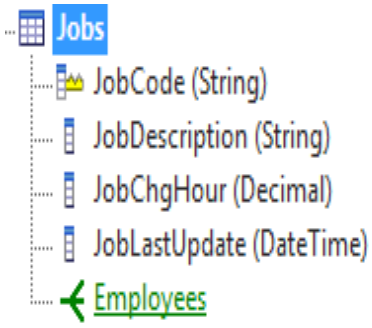

- **Tutorial Tasks:**

  Consider the following two tables from the database used in Tutorial 5.

a. If you have dropped or altered the above tables, run the script Tutorial9DBScript.txt provided on Stream to create and populate the tables again using SQL Developer.

b. Download LINQPad5 from the https://www.linqpad.net/ and follow the instructions from Week9 lecture slides to run the application and make a connection to the Oracle database. Both these tables should be available to you as shown:

c. Write the following 10 statements in C# using LINQ syntax:

1. Display all jobs having jobChgHour greater than 25. The list should be in descending order for job charge hour rate.
2. Display all jobs which were updated before 20/12/2018 date.

   Use C# syntax - DateTime DT = Convert.ToDateTime("20/12/2018");

3. Display all employees who were hired after 20/12/1999. This list should be ordered in ascending order for the hire date.
4. Display all employees who work as Systems Analyst.
5. Display all employees who have the word “Engineer” in their job descriptions.
6. Display the name of the employee who was hired first.
7. Display all employees who have a value for EmpInitial (i.e. is not null)
8. Display all employees for whom first name starts with D.
9. Display the total number of employees in each job code.
10. Display all employees who have been in a job position for less than 22 years.
